

A STANDARD YET FLEXIBLE RANGE

Our standard products come in a variety of shapes, lengths, widths, and thicknesses to meet your needs, but also European norms and regulations. At Troax, we ensure that our steel products such as barriers, gates, and protectors are safe and

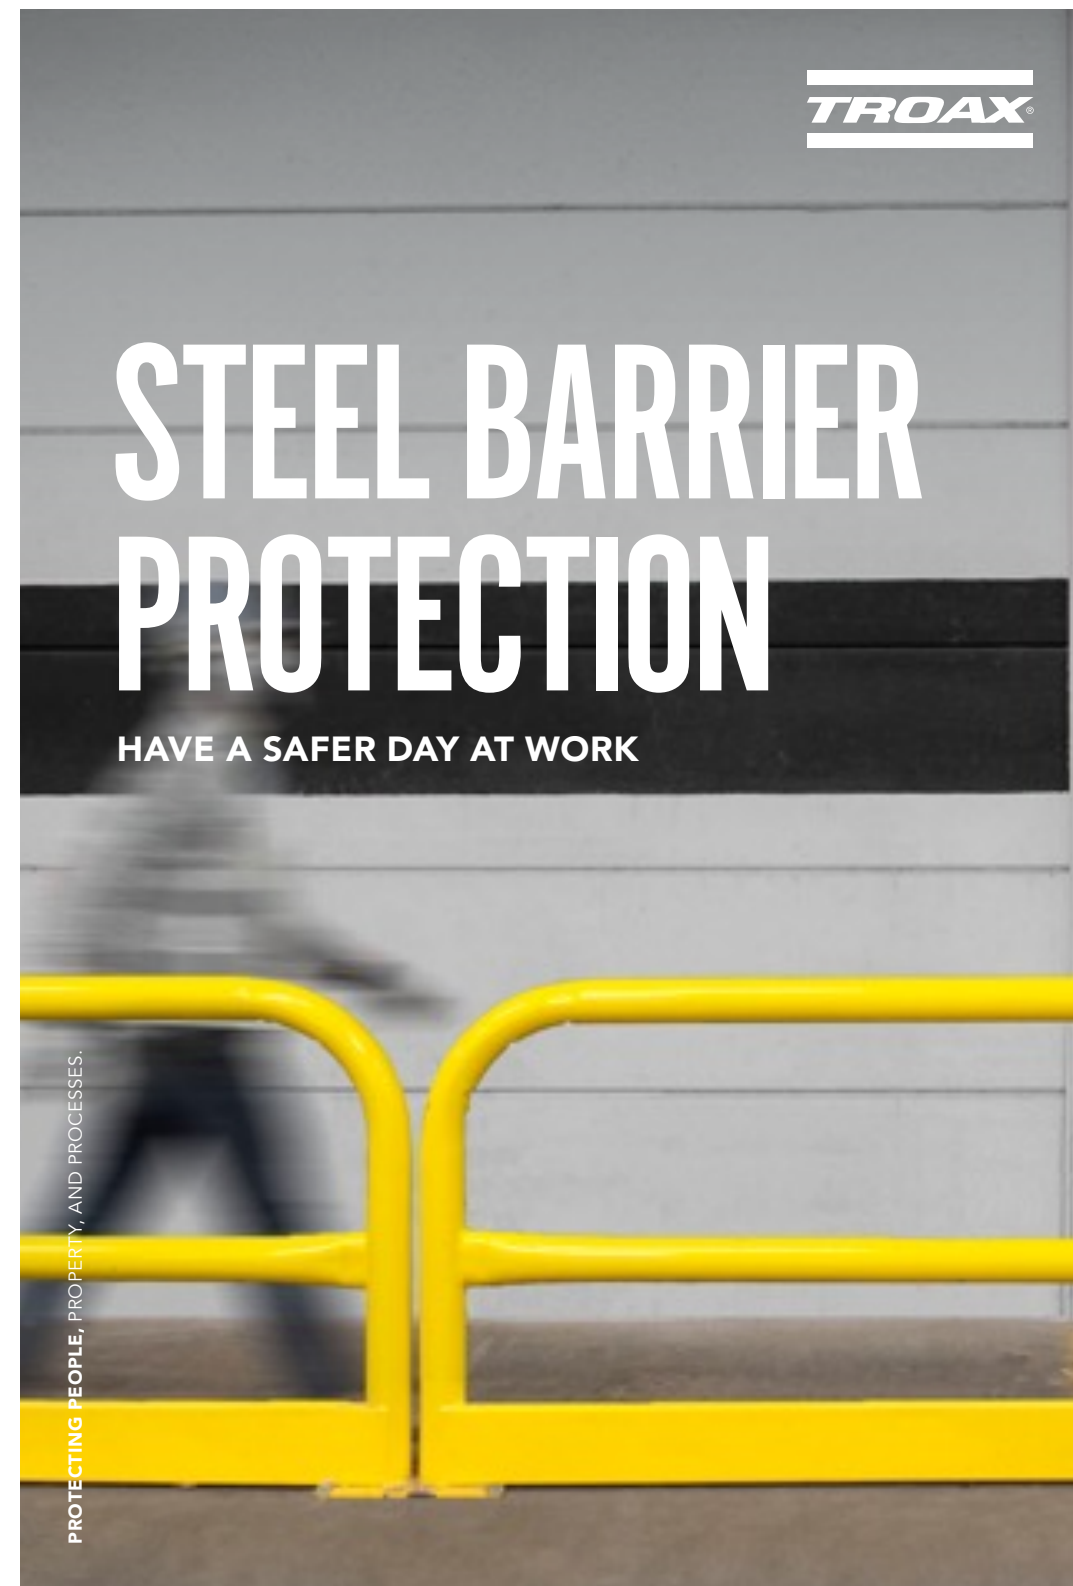

functional for their intended use, and that they're consistent in quality and performance. We use yellow as the standard colour. Its bright, attention-grabbing hue makes it easy to spot, even in low-light conditions.

STEEL BARRIER PROTECTION

HAVE A SAFER DAY AT WORK

PROTECTING PEOPLE, PROPERTY, AND PROCESSES.

UNBREAKABLE UNLIMITED UNMATCHED

Our steel barrier protection systems are designed to be safe and easy to install. They're also easy to customise to specific needs and requirements. We combine modern technology with know-how to bring ideas to life while incorporating

valuable insights and expertise. An approach that allows us to truly understand your reality and that ensures a solution that exceeds your expectations. Solutions that deliver real value to your operation and business.

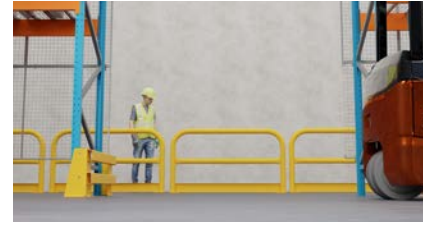

- STANDARD OR CUSTOMISED SOLUTIONS
- RAPID PROTOTYPING AND SHORT LEAD-TIME
- MODERN AND FLEXIBLE PRODUCTION IN POLAND
- MADE OF HIGH-QUALITY STEEL
- STRONG, SAFE AND SOLID
- COMPLIES TO EUROPEAN STANDARDS
- OPTIONAL WARNING STRIPES

OUR BARRIERS DON'T BREAK, THAT'S THE WHOLE POINT

Troax is one of the leading providers of steel barrier protection for warehouses, logistics facilities, and industrial environments. Our products are designed to keep workers and equipment safe, and are made of durable, high-quality steel that can withstand heavy impacts and last for many years. In short, they ensure a more efficient and safe operation by preventing accidents, injuries, and damages. Most importantly, they provide the highest level of protection for your facility, while also being easy to install and maintain. The wide range of products includes bollards, pedestrian barriers, traffic barriers, kerb barriers, and column barriers, but also

accessories such as upright protectors and rack end protectors. In addition, we offer pallet, swing and sliding gates, light grid protectors, anti-heat plates, and many other warehouse related products. All this complement our vast range of shelves and dividers, but also our market-leading panel solutions for warehouse partitioning and machine guarding. We've got you covered from the very first idea to the implementation of your solution. Our products are designed to be highly customisable, meaning that you can find the perfect solution for your specific layout and safety needs. Your only barrier to a safer tomorrow is a new conservation. If you want to get it right, talk to Troax.

SAFETY & TRAFFIC BARRIERS

Our safety and traffic barriers are used to secure, and separate working areas and traffic routes from each other. They provide optimal protection for machinery and personnel. Choose our lighter barriers for pedestrian areas or our heavy-duty barriers for areas where there's a high risk of vehicle collision.

HEAVY TRAFFIC BARRIERS

Heavy traffic barriers are effective measures to ensure the safety of workers who may be in proximity to forklifts and other vehicles. The robust construction with rectangular posts and beams significantly reduces the risk of accidents and injuries. A high safety standard that can be endlessly customised.

STEEL BOLLARDS

Bollards can be used to highlight and protect entrances and gates, or to mark off areas that are off-limits to vehicles. Our bollards can also be used to guide traffic flows in a specific direction. No matter the context, they're designed to withstand heavy impacts.

RACK PROTECTORS

Our front and corner protectors are designed to protect pallet rack posts or uprights from accidental collisions with forklifts or other moving pallet load units. The corner protectors can also be combined with a c-profile to create rack-end protection for both single and double racks.

KERB BARRIERS

Kerb barriers are essential safety features in many warehouses and industrial settings. They're commonly used to define designated walkways for employees and mark routes inside a warehouse or factory. The floor mounted crash barriers effectively protect both walls and racks from being hit by forklifts.

STEEL COLUMN PROTECTORS

Steel column protectors are common components in many warehouses and parking garages. They're often used to protect columns and pillars from damages caused by forklifts and other heavy vehicles. The strong steel structure absorbs and distributes the force of an impact, and thereby protecting the column.

PALLET GATES

Our pallet gates are used for safe loading and unloading pallets onto raised mezzanines. In other words, the gates prevent pallets from falling and people from accidents. It's a useful addition to any logistics and industrial facility that requires both safe and efficient movement of pallets between levels.

LOCK & STOP SIGNS

The lock & stop sign by Troax functions in the same way as a traditional stop sign in traffic, but there's a major difference. It has wheels, making it easy to move it around and lock it into position. The sign provides information to the truck driver that loading, or unloading is in progress. Simple, yet effective.

CUSTOM-MADE JUST FOR YOU

At Troax, we respond to what our customers want. That's why our standard assortment can be freely customised to fit your specific needs and requirements. We can modify our existing barriers to include additional features or functions that you require. Think of it like a service, not a product. Our team provides the highest level of customer service and support, and we're committed to working with you every step of the way to ensure that you receive a solution that is perfect for you. We've got the expertise and experience to make it happen.

→ CONCEPT

The first conceptual stage involves research into both customer needs and market trends. We solve your problem by identifying a viable solution that meets your specific needs.

→ DESIGN

Our technology department can adapt everything to your needs. This stage includes testing and validation of the design, to ensure that it meets the required specifications.

→ IMPLEMENTATION

We have a modern machine park and skilled production workers that guarantee a positive outcome. Troax ensures that your solution is seamlessly integrated into your operation.

→ INSTALLATION & SERVICE

Our team provides professional installation, as well as ongoing service and support, to ensure that the product continues to perform at its best and to address any issues that may arise.
